Objective of the Programme

Students of Chemistry Department are always inspired from the beginning of their classes since first the very beginning. They have been trained by the teachers to develop their skill and present themselves in front of others. This will help in their M.Sc. courses where they must present seminars as a part of their exam. During this period, they are provided with diverse study materials. The computer lab provides them with advanced software's and technologies to supplement their growth. This helps students to get acquainted with basics of computing as well. These software development programmes are very much helpful in their studies apart from traditional education. After their presentation over assigned topics are over, it has been noted that they gradually develop a command over their speaking skills. To add more to it students are made to face subsequent questions after their presentation gets over. This student build-up seminar programme has been started from 2018 and are up to date with the curriculum.
